

CRT's Digital Certificates

The Tequila Regulatory Council (A.K.A. CRT), with the aim of making the Tequila Export Certification process more efficient, increasing the level of security as well as optimizing human and material resources, will start issuing Digital Certificates of Authenticity (CRT's) including Electronic Signature and QR Code, as of **June 29, 2020** to export Tequila and Beverages prepared with or based on Tequila.

To validate document legitimacy, you must download the app VALIDAAP at the following address <http://app.crt.org.mx> (Available for iOS and Android)

Therefore, all Mexican exporters may show any of the aforementioned documents at customs for clearance. Until December 31st, 2020 Mexican customs will continue accepting certificates in the physical form and electronically; However, starting January 1, 2021 only electronic signature and QR code will be accepted. The above process has been made in order to protect the industry with legitimate documents, reduce the process and times for issuing them, and to have a positive impact to the importers and the Mexican authorities against the falsification of official documents, thereby guaranteeing the legitimacy of the document and the product itself.
